Projects

BackBoneX | GitHub: <https://bit.ly/3FtOtRn>

Project Manager

Deployed Application: <https://bit.ly/3ttlrPj>

- BackBoneX is a web application for chiropractors to help their clients manage the exercises recommended for each individual by creating a unique workout plan for each client. Assisted with setting up the cloud database for each exercise and created a project plan with daily sprint meetings.
- Tools/Languages: Node.js, MySQL, MongoDB, React.js, MUI, JWT, Heroku

Experience

Actuarial Associate

AIG – Houston, TX

08/2018 – 09/2021

- Consult with programmers and management regarding updates to the cloud illustration system
- Successfully transferred UL products from a TPA Legacy illustration system to our current illustration system, saving AIG over \$250,000 a year in usage and maintenance fees while improving functionality

Business Analyst

American National – Galveston, TX

03/2017 – 08/2018

- Saved the company \$60,000 in annual payment reporting fees through data analysis
- Created detailed business requirements and test plans to give the programming team guidance on service requests
- Constructed detailed flowcharts in order to better visualize different business processes

Data Analyst

Lockton Companies – Houston, TX

02/2015 – 07/2016

- Automated the formatting of clients' quantitative and qualitative claim information in Microsoft Excel using macros, leading to a 60% decrease in time spent for each completed report while also improving accuracy
- Created process documentations, technical procedures, and provided one-on-one training for actuarial data processing, resulting in a well-aligned team and overall improved performance and data accuracy

Education

- Certificate—Full-Stack Developer Bootcamp, Rice University
- Bachelor of Mathematics—The University of Texas at Austin
